FRANK P. MILBURN
ARCHITECT

BY THE ATLANTA TERRAZZO CO. ATLANTA GA

TO THE PUBLIC.

USEFUL information for those interested in the erection of buildings, artistic as well as durable. Much money has been spent on large buildings, without considering progressive ideas of construction, or pleasing effects in Architecture. One of the greatest points to be considered is the scientific, as well as the practical manipulation of all raw material entering into these structures.

Long experience has taught me that nothing is too good in the way of material, and I spare no time or expense to secure the best results obtainable in preparing the plans and specifications, and superintending the construction. You may have an elegant set of plans, and if the builder does not follow them, the owner is the loser, and the architect has to shoulder the blame. So many of our profession understand the theory but are unable to put the same into practical execution.

On the following pages of this brochure will be found a few suggestions to the public, also cuts of a few buildings executed in my office.

The advertisements that appear in this book represent the very best firms in their respective lines and solicit first class work. Parties who desire good work and low prices will do well to correspond with them.

Yours respectfully,

FRANK P. MILBURN.

Oak Ridge, N. C.

READ THIS.

Heavy excavations should not be made during July and August in our southern climate.

Lay foundations with cement-mortar. In freezing weather keep the brick dry, in hot weather wet them.

All floors should be double. The rough floor in frame buildings should extend to siding and will make a very good fire stop, as this will catch falling mortar from the plastering.

Make wide verandas, and avoid using sap flooring.

Avoid openings to attic or resting places for birds at the cornice line.

Do not lay wood shingles in lead paint, it rots them.

Use only dry lumber for finish, and avoid using green lumber in the frame.

Attics should be well ventilated to carry out the heated air between ceiling and roof.

Chimneys should be built from the ground. Make walls of flues not less than 8 inches thick; flues for stove, 8 inches square; flue for fire-place not less than 8x12 inches.

Two-thirds of the fires are caused by defective flues and 4-inch walls. Chimney tops should be laid in cement-mortar.

Hearths for fire-places should be laid in cement-mortar in order to prevent rats and mice from undermining them.

Avoid carpet strips between connecting doors. They are troublesome to the housekeeper.

See that your gas or electric outlets are located to be convenient, and in the places most needed.

See that proper spaces are provided for beds, bureaus, buffets, etc.

Doors should not open into closets or hallways.

Doors to buildings where large gatherings are held should open outside.

Locate dining-room according to prevailing breeze in summer.

Closets, moth-proof, can be had by using cedar ceiling.

Provide picture moulding. This saves the damage to plastering.

Staircases should be wide, well lighted, and have wide step with easy rise; 6½ in. is good height.

Avoid winding stairways, especially in public buildings.

When you have decided to build consult a first-class architect, who should be a master builder.

The charges of all reputable architects are the same. It is poor economy to employ a man who does not know his business, at any price.

CHARLOTTE'S FINE COURT HOUSE.

A FEATURE of improvements in the South is the many new municipal buildings that have been erected, are under contract, or in contemplation. Considerable attention is given to the introduction of progressive ideas in these structures, and as a result there is to be seen many pleasing examples of architecture in this direction. Herewith is illustrated the new Temple of Justice for Mecklenburg County, North Carolina. It is one of the best in the State. It occupies the site of Queen Anne's Museum, built in 1776, on Tryon Street. The building is of fire proof construction, 75x120 feet, with granite foundations and approaches. Buff brick and buff stone facade, marble floors, and hardwood finish add to the beauty of the building. It is regarded as a remarkable building for the cost, \$50,000, and much credit is given the County Commissioners for the wisdom of their choice. The Architect, Frank P. Milburn, of Charlotte, N. C., was selected, after plans prepared by twenty-seven prominent architects from all parts of the United States had been examined. The principal entrance is quite imposing, with open portico above, surmounted by a large dome of pleasing proportions. *Manufacturers' Record, October 2, 1896.*

BOARD OF COUNTY COMMISSIONERS.

CHARLOTTE, N. C., Oct. 16th, 1898.

To Whom it may Concern :

This is to certify that the Building Committee of the new Court House, of Charlotte, N. C., adopted plans submitted by Frank P. Milburn, Architect, for our new Court House, the same being in their judgment the best design submitted, from more than 20 Architects.

During the construction of our building, we found Mr. Milburn a practical man, and his plans have given us entire satisfaction.

Yours truly,

(Signed) JNO. R. ERWIN, Chairman.

OFFICE
W. P. SNELGROVE,
COUNTY SUPERVISOR.

Mr. FRANK P. MILBURN,
Charlotte, N. C.

ANDERSON, S. C., Aug. 1st, 1898.

Dear Sir :

At a meeting of our Building Committee to day, which perhaps will be the last held, it was unanimously agreed that we should not adjourn without expressing our entire satisfaction with you as a man, who will carry out to the letter, his contracts. You have intelligently and conscientiously discharged every duty and obligation imposed upon you by reason of being the Architect of the new Court House and Jail for Anderson County.

The Court House is given up to be the handsomest County building in the State, and our people all laud their praises of both the Jail and Court House.

There has not been a hitch between the Building Committee and the Contractors, and both buildings have been completed according to the plans and specifications furnished by you, and this speaks worlds for the Architect.

In addition, we want to say that you have made friends of this entire committee, and that you are at liberty to refer at any and all times to either of us.

Respectfully,

(Signed) W. P. SNELGROVE, Chairman.

" J. D. MAXWELL, Sec'y.

" JOHN H. JONES.

" J. F. CLARKE.

I hereby certify that the signatures to the above instrument of writing are genuine. Witness my hand and official seal this Aug. 12th, 1898.

(Signed) JNO. C. WATKINS, Clerk Court, C. P. & G. R.

WHAT OTHERS SAY.

BAILEY BROS., TOBACCO MANUFACTURERS.

WINSTON, N. C., Dec. 4, 1896.

To Whom Concerned:

Mr. Frank P. Milburn was our Architect for the New Court House in this County, which cost \$60,000. His plans have worked out nicely, and we found him to be a practical superintendent in every respect. Our building is considered one of the best in the State and our people are well pleased. We with pleasure recommend Mr. Milburn to any one in need of an Architect, as an honest, capable man, worthy of the confidence of any one.

J. F. MILLER, C. B. B.

G. B. BINGHAM,

JUDGE OF THE TRIGG COUNTY COURT.

CADIZ, KY., Nov. 11, 1895.

To Whom it may Concern:

We the undersigned Commissioners of Trigg County, in the matter of erecting a new Court House for said County, do hereby certify that Mr. Frank P. Milburn was our Architect (having selected his plans from quite a number submitted to us), and as such was highly satisfactory. We cheerfully commend him as worth of the consideration of any who may desire the services of a good man, a good Architect, and everything the term implies. We have a first-class building, and the best one we ever saw for the cost.

T. K. GRASTY, Trigg County Clerk.

Signed,
G. B. BINGHAM,
JNO. D. SHAW,
J. M. TAYLOR,
R. A. BURNETT.
Committee.

COUNTY CLERK'S OFFICE.

WELCH, W. VA., May 4, 1895.

Know all Men by these Presents:

That we selected Frank P. Milburn as the Architect of our new Court House and Jail, having had plans from twelve different architects to select from. Both buildings are now complete, at a cost to our County of \$54,000. They are a monument to our County, and a credit to the Architect. We are well pleased and satisfied with same, and do not hesitate to recommend Mr. Milburn to County officers in need of his services, as a man worthy and well qualified in his profession.

W. BURBRIDG PAYNE, C. C. C. C.

Signed,
T. K. TOTTEN,
W. C. DANIEL,
H. C. FLESHER.

IT has been a matter of some wonder to me that while the law is very particular in seeing that the lawyer and doctor are up to a certain standard in their professions, an Architect is allowed to practice with no credentials other than the sketch he carries. Yet the Architect who builds your homes and public buildings is of more importance than your lawyer or even your physician; for they have each only their respective work while the Architect has in his hands the construction, he must see that the materials used are of sufficient strength to support the load for whatever the building was intended. An Architect may render a beautiful drawing and still not have sufficient knowledge of construction to use proper material and workmanship to avert a calamity which has frequently happened by the total collapsing of large buildings. Added to this he must understand the proper sanitary conditions, as well as heating, ventilation, arrangement and acoustics, and many other things requiring a practical knowledge not shown in the most magnificent drawing. An Architect should fully understand political economy. To economize in the proper use of all materials and yet in no way impair the strength of the superstructure.

A More Beautiful Front

can be made by using our celebrated bricks, than with any other white or gray bricks known to the trade.

They are made from mountain clay by the stiff mud process, are hand pressed and will not change color.

They have stood the test for many years and are growing in popularity more and more.

The "Salt and Pepper" Grays and Silver Grays are of a pure warm color and free from any objectionable yellow tinge and give character and tone to a front which no other gray bricks can give. The dry-pressed bricks are smoother than ours and give a shiny appearance to a building, which many people do not like.

They Harmonize with all other Colors.

Varnish in Architecture

A WORD FOR THE CLIENT.

There would be fewer mistakes made in the world if it were ordained that only the maker of a mistake should suffer the consequences. More care would be exercised, and a more perfect state of affairs would prevail if every man had to bear the whole brunt of his own errors or miscalculations.

Take the interior finishing of a house for instance, if a poor or unsuitable varnish is used for the woodwork, the real sufferer is neither the Architect who specified it, the Contractor or the Finisher, but the Owner who has no practical knowledge of Varnish, and who had nothing whatever to do with making the blunder.

It is largely within the power of the Architect to protect his client from becoming the victim of a mistake of this kind by carefully specifying the right Varnish.

If hard Oil Finish is specified and used, the result will be the finest finish attainable on wood, but it should be remembered by both Architect and Client that there is no Hard Oil Finish but "Berry Brothers' Hard Oil Finish", and sealed cans bearing our label should be insisted upon.

Finished woods and interesting pamphlets on natural wood finishing sent free to any address upon application.

Prepared Gravel

and Slag Roofing.

THIS is put up in rolls of 108 square feet each, 32 inches wide, and we claim that it is the most perfect and durable Roofing on the market. They are composed of two sheets of wool felt. These two layers are cemented together under hydraulic pressure; the surface is then coated over with pliable Asphaltum, into which is imbedded under pressure, screened gravel or crushed slag. This makes a heavy, compact Fire and Water-proof Roofing, which is fastened to the sheathing board with nails, same as other composition roofings. We furnish with each roll of roofing enough Asphaltum to paint between laps of the Roofing. This completes the roof.

Prepared gravel and slag roofing have a two-inch margin on the edge that is free from gravel or slag. This is used for the lap and insures a water tight joint. We use a grade of screened gravel that is free from dirt, of a uniform size, for the Prepared Gravel Roofing; and on the Prepared Slag Roofing we use a crushed slag, free from dirt and of uniform size and color. This slag is a cinder from the iron furnaces, and owing to its peculiar shape, covers the surface of the roofing perfectly.

ESTABLISHED 1876

THE ELEMENTS

Are the only legitimate despoilers of paint. Paint that chinks, cracks, scales, darkens or discolors from inherent weakness is not good paint, and should be avoided in the specifications of the careful architect. * * * * *

COMBINATION PAINTS

Based on ZINC WHITE have no inherent defects. The elements wear them away in time, but they do not decay, nor darken, nor change color. The careful architect, who values permanence of color and material, will specify an adequate proportion of ZINC WHITE in all house paints. * * *

See Our Terse Practical Treatises:

"The Paint Question",
"Paints in Architecture",

Contrast is the Measure.

CONTRAST IS THE MEASURE OF VALUE.

A woman would not be called fat if all women were fat.
If all lumber were as good as that we sell, we could not say ours was
the best.

As it is, we can.

Compare it with any on the market. Use a spy glass, or a searchlight,
or the X rays, or any other severe test, and it will still come out ahead.

We can afford to talk thus strongly, because we are sure of our position.
People who come to us, come again. They report the utmost satisfaction.

We have a standing offer to refund your money on any unsatisfactory
material bought from us, or to send other material if you prefer.

That protects you—and does no harm, for we are rarely asked to refund
money or replace goods.

We sell honest material. It is honest through and through, up and down
and all around. That is the only kind you can afford to use. You may be
always sure of getting it here.

It may cost a little more than the uncertain kind—and it may not.
We send catalogue for the asking.

FURMAN NEW MODEL HOT WATER BOILER.

GIBBS ACETYLENE GAS GENERATOR.

SEE THAT YOUR NEW HOUSE HAS A PERFECT HEATING and LIGHTING SYSTEM

For comfortable and even heat use

A Furman Boiler FOR STEAM OR HOT WATER HEATING.

A FEW IMPORTANT POINTS

Our Boilers are easy to manage, a woman can take care of one with perfect safety—they are durable, noiseless, free from dust, gas or smoke, and are provided with automatic draft regulators, thus insuring an even temperature at any and all times. They are highly economical and a source of great comfort.

Send for testimonials of hundreds of pleased users.

ACETYLENE GAS-LIGHTING.

Cheaper than Oil—More Brilliant—than Electricity—The Modern Light of America—Read this, please:

"I have had in operation at my residence on Le Conte Mountain, for the past two years, one of your Gibbs Acetylene Gas machines. I have found it thoroughly satisfactory in every respect, requiring practically no attention and yielding a light that I consider the best outside of sunlight. My friend, Mr. F. B. Sizer, also put one in at my suggestion, and I am satisfied that he will report as favorably as I have done.

Very truly yours,

Signed, O. L. HURLETT

Secretary Rome Iron Co., Chattanooga, Tenn.

IN BRIEF:

We shall thank you for the courtesy of allowing us to send you our latest, complete illustrated catalogue describing fully the merits of our celebrated FURMAN BOILERS and explaining thoroughly our modern and economical system of heating, and the cost of the same. Also circular of the GIBBS ACETYLENE GAS GENERATOR. These are subjects that should and *must* have your consideration in planning a modern and a healthful home.

Write us to-day for our prompt attention—simply a postal card will bring you the information free of charge. Address
